

Notification Configuration using Flow Designer & UI Policy

1) Create a Flow for Notification

Flow Trigger Configuration

Configured the trigger for the "SLA at Risk Notification" flow on the Task SLA table. The flow triggers when a Task SLA record is created or updated, provided the SLA Definition is "Incident Resolution - Virtual Agent Governance" and the Business Elapsed Percentage is greater than or equal to 80%. The Run Trigger is set to "Once" to prevent duplicate notifications for the same SLA breach event.

The screenshot shows the 'SLA at Risk Notification' flow configuration in the Workflow Studio. The trigger is set to 'Task SLA Created or Updated where (SLA definition is Incident Resolution - Virtual Agent Gove, and Business elapsed percentage less than or is 80)'. The trigger type is 'Created or Updated'. The table is 'Task SLA'. The condition is 'All of these conditions must be met' with two criteria: 'SLA definition' is 'Incident Resolution - Virtual Age...' and 'Business elapsed percentage' is 'less than or is' 80%. The 'Run Trigger' is set to 'Once'. The 'Advanced Options' button is visible at the bottom.

Look Up Record Action

Added the "Look Up Record" action to retrieve the related Incident record from the triggering Task SLA. The condition matches the Incident's Sys ID to the Task field on the trigger record, with "Return only the first record" enabled to ensure a single record is returned for use in the subsequent actions.

The screenshot shows the 'Look Up Incident Record' action configuration in the Workflow Studio. The action is 'Look Up Record'. The table is 'Incident [incident]'. The condition is 'All of these conditions must be met' with one criterion: 'Sys ID' is 'Trigger - Record Cr...'. The 'Order by' is 'Select a field' and 'a to z'. The 'If multiple records are found action' is 'Return only the first record'. The 'Don't fail on error' checkbox is unchecked. The 'Done' button is visible at the bottom.

Update Record Action

Added the "Update Record" action to update the Incident retrieved in the previous step. This action sets the "SLA At Risk" field to true and appends a Work Note stating "SLA crossed 80%. Governance activated." This flag drives the UI Policy that makes the governance fields mandatory on the Incident form.

The screenshot shows the configuration for the 'Update Incident Record' action. Under 'Action Properties', the 'Action' is set to 'Update Record'. Under 'Action Inputs', there are three main sections: 'Record' (set to '1 - Look Up R... Incident Rec...'), 'Table' (set to 'Incident [incident]'), and 'Fields'. The 'Fields' section includes 'SLA At Risk' (checked) and 'Work notes' (set to 'SLA crossed 80%. Governance activated.'). There are also buttons for 'Delete', 'Cancel', and 'Done' at the bottom right.

Send Email Action (Assignee Notification)

Added the first "Send Email" action, targeting the Incident record and sending to the Assignee's email address. The subject line reads "SLA At Risk – Immediate Action Required" with the Incident number, and the body instructs the assignee to acknowledge the SLA risk and provide justification, either directly on the Incident form or through the Virtual Agent conversation.

The screenshot shows the configuration for the 'Send Email' action. Under 'Action Properties', the 'Action' is set to 'Send Email'. Under 'Action Inputs', there are several fields: 'Target Record' (set to '1 - Look Up R... Incident Rec...'), 'Table' (set to 'Incident [incident]'), 'Include Watermark' (checked), '* To' (set to '1 - Look Up Record > ... > Email'), 'CC', 'BCC', and '* Subject' (set to '1 - Look Up Re... > ... > Numb...'). At the bottom, there is a 'Body' section with a text area containing 'Hello 1 - Look Up Record > ... > Name'.

Assignee Email Body Detail

Detailed view of the assignee notification email body, confirming the dynamic data pills for the Incident number and Assigned To name are correctly inserted, along with clear step-by-step guidance directing the user to the Service Portal Virtual Agent for guided resolution.

SLA at Risk Notification Inactive

View: Test Activate

* To: 1 - Look Up Record > ... > Email

CC:

BCC:

* Subject: 1 - Look Up Re... > ... > Numb...

Body

Hello 1 - Look Up Record > ... > Name
 The SLA for Incident [1-Look Up record > Incident Record > Number] has reached a critical threshold. Please acknowledge the SLA risk and provide justification immediately.
 Action required: You can also use the Virtual Agent to complete this action.
 Steps:
 1. Open Service Portal
 2. Click on Virtual Agent (chat icon)
 3. Select "SLA Breach Awareness & Justification"
 4. Follow the guided steps
 Regards,
 ServiceNow System

Send Email Action (Manager Notification)

Added a second "Send Email" action targeting the Assignee's Manager. The subject reads "View SLA Governance Dashboard" and the body informs the manager that the SLA for the given Incident has reached a critical threshold, with a placeholder left for the SLA Governance Dashboard link, to be finalized once the Reporting & Dashboard Setup epic is complete.

Complete Flow Overview

Final view of the "SLA at Risk Notification" flow showing all four configured actions in sequence: Look Up Incident Record, Update Incident Record, Send Email (Assignee), and Send Email (Manager). The flow was set to Active, and Error Handler was left disabled as no custom error handling was required for this scope.

2)UI Policy Configuration

UI Policy Main Configuration

Created the "SLA Risk Governance Fields Mandatory" UI Policy on the Incident table. The policy is Active and Global, with the condition set to "SLA At Risk is true". The policy is configured to reverse its effects when the condition evaluates to false, and to apply "On load" so the fields update dynamically as the form loads or the condition changes.

The screenshot shows the 'UI Policy: SLA Risk Governance Fields Mandatory' configuration page. The policy is active and global. The condition is 'SLA At Risk is true'. The policy is configured to reverse its effects when the condition evaluates to false, and to apply 'On load'.

UI Policy Actions

Configured three UI Policy Actions under the policy, making SLA Breach Reason, SLA Breach Justification, and SLA Acknowledgement all Mandatory = True and Visible = True,

with Read-only left as "Leave alone" so the assignee retains write access to these fields once they appear.
